

# CSCI 380.61E Web Programming and Interface Design

## Part 2

### Part 2 – React.js Front-End & API Integration (Development Phase)

#### Objectives

- Implement the front-end using **ReactJS**.
- Develop or connect to a simple **API server** (Hapi/Express).
- Ensure front-end and back-end communicate properly via HTTP requests (GET, POST, PUT, DELETE).

#### Requirements

- Use **React functional components** and hooks (useState, useEffect, etc.).
- Apply **component-based design principles** and clear file organization.
- Use **RESTful API design** principles on the server side.
- Integrate **API** data source.
- Include **basic form validation** and **error handling**.

#### Deliverables

- ReactJS source code (include package.json)
- HapiJS source code (include package.json)
- Report file describing:
  - Setup instructions
  - Dependencies
  - API endpoints
  - Screenshots

#### Submission:

- Document in PDF/Word
- Zipped source code
- GitHub repository link (optional)
