NODEJS

- <https://nodejs.org/en/download>

Download Node.js®

Get Node.js® v22.19.0 (LTS) for macOS using nvm with npm

Info Want new features sooner? Get the [latest Node.js version](#) instead and try the latest improvements!

```
1 # Download and install nvm:
2 curl -o- https://raw.githubusercontent.com/nvm-sh/nvm/v0.40.3/install.sh | bash
3
4 # in lieu of restarting the shell
5 \. "$HOME/.nvm/nvm.sh"
6
7 # Download and install Node.js:
8 nvm install 22
9
10 # Verify the Node.js version:
11 node -v # Should print "v22.19.0".
12 nvm current # Should print "v22.19.0".
13
14 # Verify npm version:
15 npm -v # Should print "10.9.3".
```

Bash Copy to clipboard

* NVM

Installing and Updating

Install & Update Script

To **install** or **update** nvm, you should run the [install script](#). To do that, you may either download and run the script manually, or use the following cURL or Wget command:

```
curl -o- https://raw.githubusercontent.com/nvm-sh/nvm/v0.40.3/install.sh
```

```
wget -qO- https://raw.githubusercontent.com/nvm-sh/nvm/v0.40.3/install.sh
```

REACTJS + VITE

- <https://react.dev/learn/build-a-react-app-from-scratch>

Vite

Vite is a build tool that aims to provide a faster and leaner development experience for modern web projects.

Terminal

Copy

```
npm create vite@latest my-app -- --template react
```

Vite is opinionated and comes with sensible defaults out of the box. Vite has a rich ecosystem of plugins to support fast refresh, JSX, Babel/SWC, and other common features. See Vite's [React plugin](#) or [React SWC plugin](#) and [React SSR example project](#) to get started.

Vite is already being used as a build tool in one of our [recommended frameworks](#): [React Router](#).

MONGODB

- <https://www.mongodb.com/docs/manual/administration/install-community/>

The screenshot shows the 'Install MongoDB Community Edition' page. It features a dark blue header with the title and a 'Copy page' button. Below the header, a paragraph states: 'These documents provide instructions to install MongoDB Community Edition.' The page lists four installation methods: Linux, macOS, Windows, and Docker, each with a brief description of the steps involved.

Install MongoDB Community Edition Copy page

These documents provide instructions to install MongoDB Community Edition.

Install on Linux
Install MongoDB Community Edition and required dependencies on Linux.

Install on macOS
Install MongoDB Community Edition on macOS systems from MongoDB archives.

Install on Windows
Install MongoDB Community Edition on Windows systems and optionally start MongoDB as a Windows service.

Install on Docker
Install a MongoDB Community Docker container.
