CSCI 380.61E
WEB PROGRAMMING
AND INTERFACE DESIGN

An abstract graphic on the left side of the slide, consisting of several thin white lines that intersect to form a series of overlapping, tilted rectangles and polygons. The lines are white and stand out against the solid black background.

ROUTING AND COMPONENT STYLING

Web Programming and Interface Design

LEARNING OBJECTIVES

- Understand client-side routing in React
- Use React Router for navigation
- Implement dynamic routes with parameters
- Explore different styling approaches in React

WHAT IS ROUTING?

- Routing allows navigation between pages
- In SPA, routing is handled on the client side
- React Router is the standard library for routing

REACT ROUTER BASICS

- Install: `npm install react-router-dom`
- Import `BrowserRouter`, `Routes`, `Route`, `Link`
- Define routes and navigation links

EXAMPLE - ROUTES

```
import { BrowserRouter, Routes, Route } from 'react-router-dom';
```

```
function App() {  
  return (  
    <BrowserRouter>  
      <Routes>  
        <Route path="/" element={<Home />} />  
        <Route path="/about" element={<About />} />  
      </Routes>  
    </BrowserRouter>  
  );  
}
```

DYNAMIC ROUTES

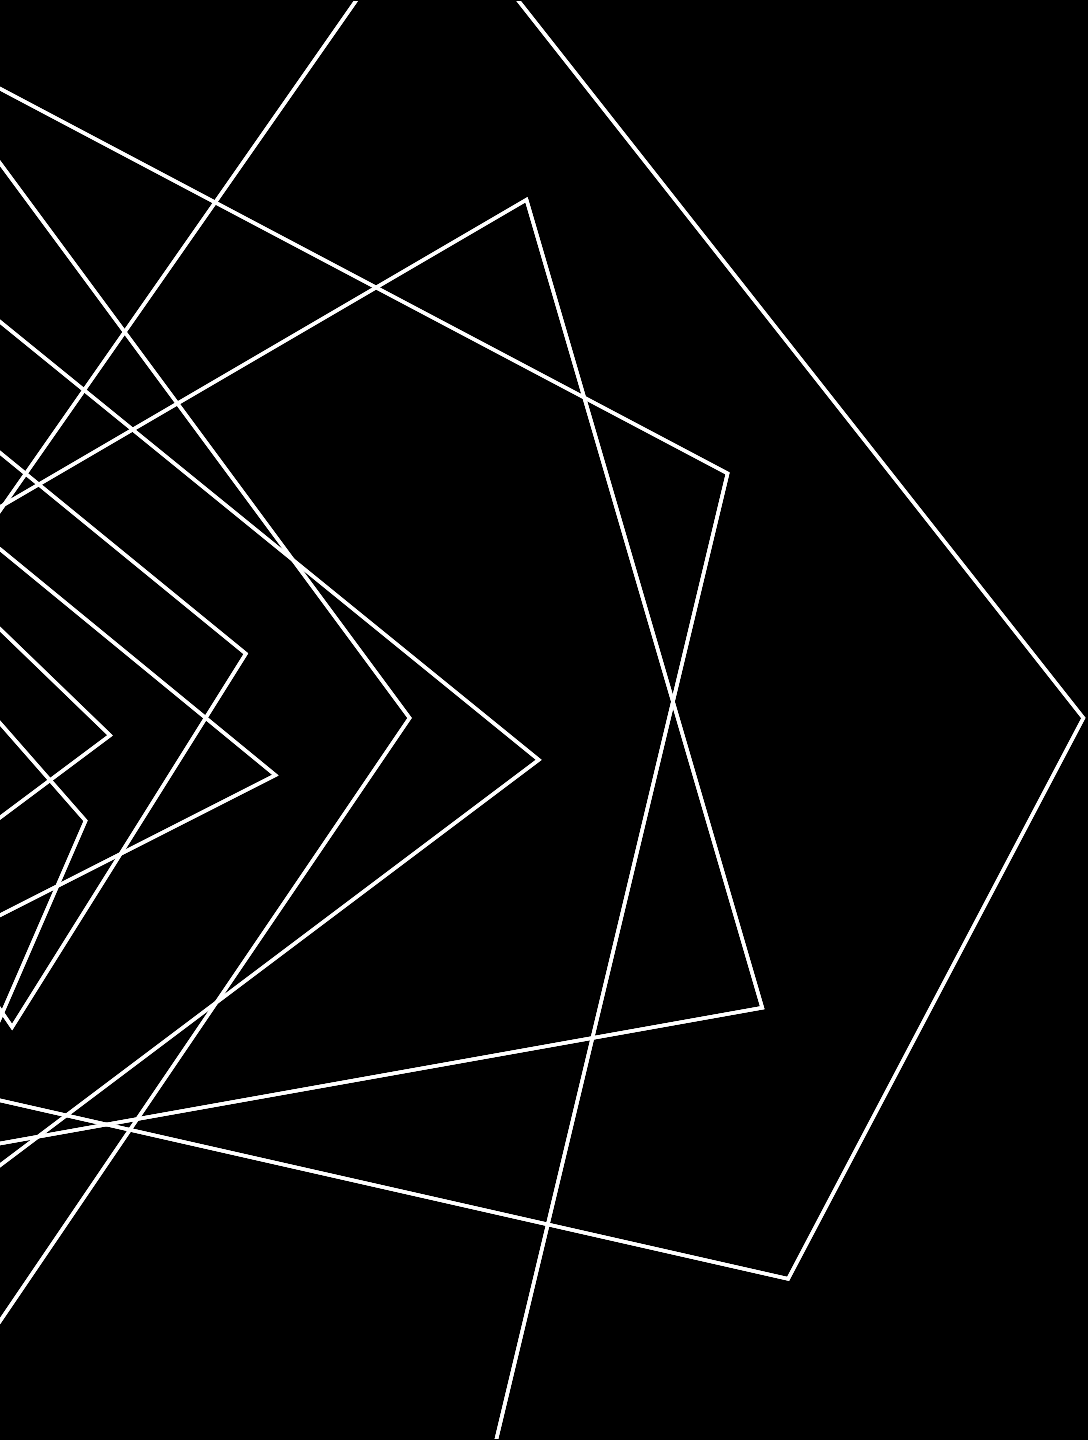

- Route parameters allow rendering based on URL values
- Example: `/post/:id`
- Use `useParams()` hook to access parameters

STYLING OPTIONS

- CSS Modules: Scoped CSS per component
- TailwindCSS: Utility-first CSS framework
- Styled-components: CSS-in-JS approach

LAB EXERCISE

- Create a multi-page app (Home, About, Contact)
- Add navigation with React Router
- Style components using CSS Modules
